Sponsored by Well Sense Health Plan

4:15 pm Closing Remarks – It’s All Connected

4:30 pm Adjourn

PROGRAM LEARNING OBJECTIVES

- Discuss at least three benefits of the use of silver diamine fluoride in underserved populations within our state;
- Identify a minimum of three community-based settings, outside of the private dental office, where individuals and families can easily access oral health service;
- Describe one example of a medical diagnosis or condition that is closely associated with oral health and oral disease;
- Name two types of dental team members that can provide some service in the home setting;
- Name two types of non-dental providers that can address oral health in their work; and
- Define one systemic barrier to sufficient oral health/dental services for underserved populations, and a solution to address the barrier.
